

FX Rate Trend & Business Impact Analysis

Business Impact Report (Portfolio Case Study)

Company Profile

GlobalBridge Consulting Pvt. Ltd. is a fictional IT consulting company created for this portfolio case study. During July 2023, the finance team analyzed how foreign exchange fluctuations affected the INR value of international client invoices.

Business Problem

The company billed international clients in USD, GBP, AUD, CAD, EUR, AED, SGD, and NZD. Daily exchange-rate fluctuations impacted the realized INR value of invoices, making revenue forecasting and financial planning more challenging.

Project Objective

Assess exchange-rate movements, convert invoice values into INR, calculate foreign exchange variance, identify financial impact, and present findings through a management dashboard.

Dataset Overview

The analysis used 500 realistic sample transactions including invoice date, invoice ID, client, country, currency, invoice amount, reference exchange rate, actual exchange rate, INR value, FX variance, and gain/loss status.

Methodology

1. Collected invoice transaction data.
2. Applied historical exchange rates.
3. Calculated $\text{INR Value} = \text{Invoice Amount} \times \text{FX Rate}$.
4. Calculated $\text{FX Variance} = (\text{Actual FX Rate} - \text{Base Rate}) \times \text{Invoice Amount}$.
5. Summarized results using Excel formulas, Pivot-ready summaries, and dashboard KPIs.

Tools & Excel Features

Microsoft Excel, SUM, AVERAGE, SUMIF, COUNTA, MAX, MIN, conditional formatting, charts, Pivot-ready summaries, and KPI reporting.

Key Performance Indicators (KPIs)

- Total Transactions
- Total INR Revenue
- Average FX Rate

Key Business Insights

- USD transactions generated the highest INR revenue.
- GBP exchange rates remained comparatively stable.
- AUD experienced higher volatility.
- Positive FX variance improved INR realization for several invoices.
- Country-wise summaries highlighted areas with greater exchange-rate exposure.

Recommendations

Monitor exchange-rate trends for high-value invoices, review currency exposure regularly, evaluate hedging strategies for volatile currencies, and publish a monthly FX dashboard for management.

Project Outcome

The project quantified the financial impact of foreign exchange movements on international client transactions and provided decision-makers with a structured view of revenue performance across currencies and countries.
